

Centralized management and reporting for multi-site, multiple Internet connection environments

From single site to complex WANs with multiple sites and Internet connections, Cymphonix® helps organizations of all types cut the time, effort, and costs that come from being connected to the Internet. Network Conductor™ is a centralized management and reporting appliance for environments with multiple locations or connections. Network Conductor streamlines setting, managing and reporting on policy across your network.

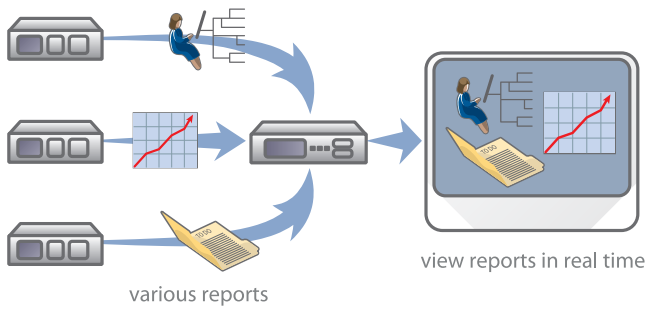

Deployment

Network Conductor is the central command for multiple Network Composer® deployments.

Centralized Reporting

Correlating data by appliances, zones, locations, groups, and users gives you clarity into traffic and network usage without needing disparate tools.

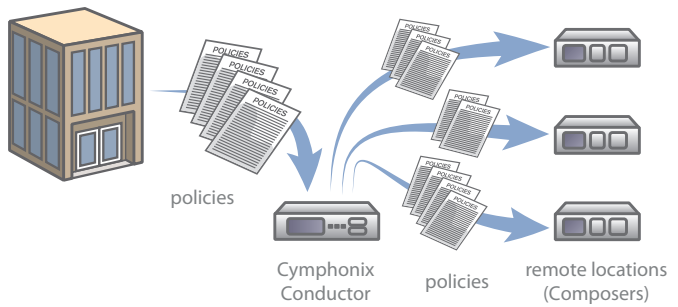

Cymphonix C5 - The Power to Manage Your Pipe

-  **CLARITY** Get the right data and make informed and effective decisions
-  **CONGESTION** Prioritize applications and traffic by what is most important
-  **CONTROL** Toss out "block/allow" and dial in on users, applications, and content
-  **COMPLIANCE** Enforce, maintain, and report on policies that keep you aligned
-  **COST** Save time and dollars with a single, integrated solution

Centralized Policy Management

Creating and deploying consistent policies to multiple sites is simple.

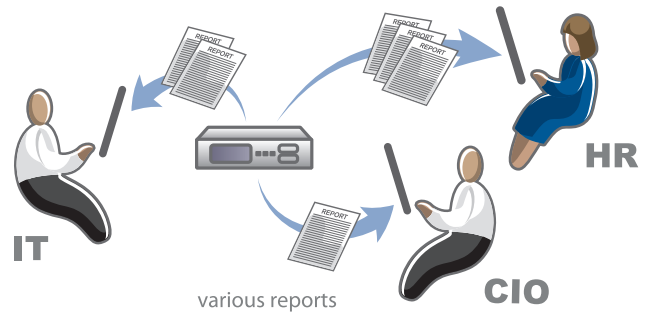

Network Conductor is ideal for these environments:

- *Distributed environments*
- *Multi-site networks*
- *Networks with multiple Internet connections*
- *Consolidating and correlating data reports across sites and groups is crucial*
- *Delegated administration is necessary*
- *Consistency and centralized policy implementation and management are required*

Improved Visibility for Operations

With Network Conductor, HR can monitor appropriate usage, onsite IT can scan WAN stats, and the CIO can stay on top of optimization and security.

Ready to learn how Network Conductor's centralized reporting and policy management will make it easier to manage your complex Internet environment?
